

What Will Happen If You Join?

- **Group A: Walking Program**

Walk 30 minutes/session, 3 days a week for 12 weeks at a comfortable pace with a diary and pedometer

- **Group B: Usual Care**

Continue standard hospital cancer care without adding a structured walking assignment

- **For All Participants:**

Complete a brief questionnaire at 3 time points: Week 0, Week 6, and Week 12 (takes 10–15 minutes each).

Taking part is entirely voluntary

You Are Being Invited To Take Part

Before you decide whether or not to participate, it is important that you understand why the research is being done and what it will involve. Please take time to read this information carefully and discuss it with your family or healthcare team

Who Can Take Part?

- Age 18 years or older.
- Diagnosed with early-stage breast cancer undergoing chemotherapy.
- Cleared by medical oncology team as safe for light-to-moderate physical activity
- Capacity to make an informed decision

CLINICAL RESEARCH STUDY

HOME-BASED WALKING PROGRAM STUDY

A 12-week research study examining the effects of a home walking program on energy levels and overall well-being during chemotherapy.

SAMPLE DOCUMENT

SAFETY, RISKS & DATA PROTECTION

- **Safety & Side Effects:**

Exercise is safe, but mild muscle stiffness or leg fatigue may occur initially.

- **Fever Protocol:**

Chemotherapy lowers white blood cells. If your temperature reaches 38°C or higher, STOP exercising and contact the 24/7 Hospital Helpline immediately.

- **Data Privacy (GDPR):**

All data is strictly confidential and coded (pseudonymized) under Irish/EU GDPR laws.

Why Has This Study Been Designed?

- Chemotherapy frequently causes cancer-related fatigue. This study tests whether a simple, structured home-based walking program (30 mins/day, 3x/week for 12 weeks) helps reduce fatigue compared to standard care

STUDY CONTACTS

 **Principal Investigator:** in progress

 **Clinical Research Nurse:** in progress

Emergency & Safety Notice (Fever $\geq 38^{\circ}\text{C}$)

A fever during chemotherapy is a medical emergency. If your temperature reaches 38°C or higher, or if you feel unwell:

- DO NOT EXERCISE.
- Contact your hospital 24/7 Helpline or go to the Emergency Department IMMEDIATELY.
-  Hospital Site:
-  DPO Email
-  Ethics Committee / Sponsor:

Self-Study Portfolio Project

- This is a mock Participant Information Leaflet, created as a self-study exercise to demonstrate clinical research skills — not a real, active clinical trial. No participants are being recruited.
- I built this by working through a full research design process independently: framing a research question, conducting a PubMed literature search, screening and extracting study data, and drafting this consent document from first principles — as part of my transition from MBBS graduate toward clinical research.

What I Taught Myself

- Framed a clinical research question using the PICO framework
- Built and refined an advanced PubMed search using MeSH terms and Boolean logic
- Screened 19 studies against defined eligibility criteria down to a single, rigorously verified trial
- Extracted and cross-checked full-text data, identifying a real gap in the current literature
- Drafted a complete Participant Information Leaflet, working through informed consent, GDPR compliance, and risk disclosure from first principles
